EDUCATION & CREDENTIALS

Master of Science, Software Systems
BITS Pilani, Rajasthan, India
January 2011

Bachelor of Engineering, Information Technology
Bengal Engineering And Science University, Shibpur, India
January 2008

TANMOY SANTRA

Senior data & ai engineer

PROFESSIONAL SUMMARY

Senior Data & AI Engineer with 17+ years of experience designing enterprise-scale data platforms, AI agents, and generative AI solutions across finance, real estate, and document intelligence domains. Specialized in Azure AI Foundry, Microsoft Fabric, OpenAI, Databricks, and modern lakehouse architectures. Proven track record delivering agentic workflows that automate business processes, improve operational efficiency, and accelerate decision-making across organizations.

SKILLS

Technical: Python, SQL, Spark, DAX, REST APIs

AI & GenAI: Azure AI Foundry, Azure OpenAI, OpenAI API, Agentic AI, RAG, Prompt Engineering, LLM Fine-tuning, Vector Search

Data & Analytics: Microsoft Fabric, Power BI, Data Warehousing, ETL/ELT, Lakehouse Architecture

Cloud & DevOps: Microsoft Azure, AWS, Azure DevOps, Github, CI/CD, Container

EXPERIENCE

March 2022 - Current

NEWSEC - Senior Data & AI Engineer, Stockholm

- Lead AI and data initiatives from business discovery through architecture, prototyping, implementation, testing, and operational adoption.
- Design agentic and generative AI workflows using Python, OpenAI API, and Azure AI Foundry for document processing, contract analysis, property valuation, and finance validation.
- Translate business processes into scalable technical designs, integration patterns, delivery roadmaps, and measurable automation outcomes.
- Built an AI document workflow that improved processing time from 11.4 to 2.8 seconds per document and reduced average input tokens from 14,200 to 3,100 without reducing accuracy.
- Architect Microsoft Fabric and Delta Lakehouse solutions connecting APIs, Azure Databricks, Azure SQL, Azure Synapse, and Power BI.
- Guide platform choices and production-readiness decisions across security, compliance, reliability, cost, and responsible AI.

September 2008 - March 2022

IBM - Senior Data Engineer, PMI, Kolkata

- Facilitated cross-functional teams in integrating advanced analytics solutions for superior decision-making capabilities.
- Designed and implemented scalable data pipelines to optimize ETL processes across diverse platforms.

April 2020 - February 2021

IBM - Data Engineer, Sodexo

- Delivered Azure data solutions using Databricks, Azure Analysis Services, Power BI, SSIS, SQL, and Python.
- Evaluated implementation options against stakeholder, security, compliance, data-integrity, and production-stability requirements.

January 2014 - March 2020

H&M - Business Intelligence Consultant, Stockholm

- Delivered and supported H&M Production Office's central decision-support platform for price, quotation, capacity, and sustainability workflows.
- Worked directly with business controllers and coordinators to map processes, clarify requirements, recommend technical solutions, coordinate releases, and support adoption.
- Built automated data and reporting solutions with Azure Data Factory, SQL Server, Analysis Services, Power BI, and Excel.
- Led delivery through sprint planning, daily scrums, testing, reviews, and retrospectives while communicating technical choices, risks, and progress.

January 2011 - December 2013

Philip Morris International - Senior Business Intelligence Developer

- Designed and supported manufacturing-intelligence solutions in a global regulated enterprise; led root-cause analysis and presented technical recommendations to management.

September 2008 - December 2010

Philip Morris International - Business Intelligence Developer

- Built and supported enterprise analytics solutions covering development, testing, debugging, performance analysis, documentation, and stakeholder coordination.

PROJECT

Nordic Advisory Analytics Platform | Newsec Nordic Advisory

Solution Architect | Microsoft Fabric | Power BI | Enterprise Data Platform

- Architected and led the implementation of a Nordic-wide analytics platform covering Sweden, Finland, and Norway using Microsoft Fabric.
- Designed a scalable Lakehouse and Data Warehouse architecture with staging, normalization, and business mart layers.
- Established country-specific ingestion pipelines for databases, Excel files, and geospatial datasets while creating a unified Nordic reporting model.
- Developed governed semantic models and Power BI reporting solutions enabling self-service analytics and executive reporting.
- Delivered a single source of truth for Advisory operations across the Nordic region, improving data quality, consistency, and reporting efficiency.

Norway Valuation Model | Newsec AI

- Designed and implemented an Azure AI Foundry Rent Roll Agent integrated with a property valuation platform.
- Automated extraction, validation, and interpretation of structured and unstructured property data from Excel, PDFs, and conversational inputs.
- Applied valuation business rules and generated standardized valuation reports used by Nordic valuation teams.
- Led solution architecture covering AI services, data integration, governance, and business process automation.

Project Overmind | Newsec AI

- Built an AI-powered financial control workflow for accrual validation, VAT compliance checks, and anomaly detection.
- Integrated accounting data sources to identify timing errors, posting inconsistencies, and material exceptions.
- Generated actionable month-end insights, reducing manual review efforts and improving reporting quality.
- Designed an enterprise-grade architecture for financial data processing and AI-driven controls.

Contract Processing Automation | Newsec Denmark

- Developed contract intelligence solutions using OpenAI, Python, and Next.js.
- Automated clause extraction, risk analysis, summarization, and document generation workflows.
- Reduced manual contract review effort through AI-assisted analysis and structured data extraction.
- Designed secure document processing workflows integrating AI services with business applications.

Technology Stack: Microsoft Fabric, Azure AI Foundry, Power BI, OpenAI, Python, SQL, Azure Data Factory, Data Warehousing, Lakehouse Architecture, Semantic Models, AI Agents, Next.js, Azure DevOps,

Enterprise Solution Architecture.

PAM Sweden Platform | Newsec PAM Sweden

- Designed and developed a centralized analytics platform for PAM SE using Azure Synapse Analytics.
- Built scalable ETL pipelines integrating data from databases, Excel files, and property management systems.
- Developed data warehouse models and PowerBI reports to support operational and financial reporting.
- Implemented data quality, governance, and monitoring processes to improve data reliability.
- Enabled a trusted single source of truth, reducing manual reporting efforts and improving business insights.

Technologies: Azure Synapse Analytics, Azure Data Factory, SQL Server, Power BI, ADLS Gen2, T-SQL, Azure DevOps, Git.

CERTIFICATION

December 2023

International Certificate in Product Management, Institute of Product Leadership

August 2023

Product Academy Series, McKinsey & Company

July 2026

Certificate of completion: Claude 101
